To whom it may concern

Sarafil Polyester do not contain any of the chemical substances listed by the State of California in Proposition 65 except Antimony as details mentioned below.

Substance	CAS-No.	Typical Specific Migration	Limit (SML) (EU) No 10/2011
Antimony trioxide	0001309-64-4	< 0.03 mg/kg	0.04 mg/kg

Based on test results for the PolyPlex Sarafil Anti-fog PET Film, test results from other PET food contact materials, and chemical properties of antimony trioxide, the criteria specified in the Proposition 65 regulations (i.e., Title 27, Section 25900(a)) are substantially satisfied and the use of Polyplex film (and films made of the same material and by the same process) would not entail a knowing and intentional exposure to antimony trioxide, and no Proposition 65 warning would be required. This conclusion would be applicable to other films made of the same polymer and with the same antimony content.

This applies to all Polyester films produced and supplied by Polyplex.
